New features of Dr.Web Security Space

- SplDer Gate, HTTP monitor

SplDer Gate, protects against malware attempting to get into a system via HTTP. It intercepts all HTTP-connections, filters all data received from the Internet - files, applets, scripts, - blocks access to infected web-pages and dangerous web-resources. It is compatible with all known web-browsers. The filtering doesn't increase traffic or slow performance of the system and web-surfing.

- Dr.Web parental control

Dr.Web parental control It will protect your children against unwanted web-resources and shield them from contacts with cyber-criminals. It can also disable usage of removable data storage devices, block access to network devices and files and folders so your personal information won't be deleted occasionally or compromised by a third party.
